3. Safety & Warnings

Read all instructions before use to ensure safety and prevent damage.

Risk of electric shock, Disconnect power before installation or maintenance.

4. Instructions for Use

I. Pre-installation Preparation

1. Power Off: Ensure that the circuit breaker of the corresponding circuit is turned off. Use an electric tester to confirm that there is no electricity before proceeding with the work.

2. Check Accessories: Verify that the lamp, screws, expansion tubes, hanging plates, lamp covers, and light sources are complete and in good condition.

3. Load Check:

1. Ceiling-mounted lamps / pendant lamps: Install on solid load-bearing walls or concrete ceilings. Do not install only on gypsum boards or ceiling joists.

2. Line Confirmation: Clearly distinguish the live wire (L), neutral wire (N), and ground wire (PE). The ground wire is the yellow-green double-color wire and must be firmly connected.

2. Power On and Acceptance

1. Test with power on to ensure the lamp lights up. Check for flickering, abnormal sounds, or poor contact.

2. Use an electric tester to measure the metal casing of the lamp. It is considered qualified if there is no leakage.

3. The lamp cover is installed properly without looseness or gaps, and the appearance is clean.

4. Safety Prohibitions

Do not connect wires while powered on or operate with one hand.

In humid areas (bathrooms), select lamps with IP44 or higher waterproof ratings and include a grounding wire.

Do not modify the wiring or connect too many lamps without authorization to avoid overloading.
